INTELLIGENCE TRANSLATION	REGISTRY NUMBER	PAGE NUMBER 1

25X1

As an annex we are enclosing a sketch, in two copies, with changes in the Czech border area. It was possible to make out the ~~following~~ observation posts listed below:

Observation platform(raised) in the forest 200 meters northeast of the boundary stone ~~#~~ 14 (point 965).

The observation tower is made of wood and the method of construction is the same as in the case of other towers.

25X1

In the last few days two new underground passageways have been ~~discovered~~ completed in the local border~~xxxx~~ strip. Both of the additional passageways, the construction of which was started a long time ago, are for the purpose of increasing the number passageways in the existing network of barbed wire entanglements.

~~Xx~~ Their ~~loc~~ exact location can be seen from the attached sketch.

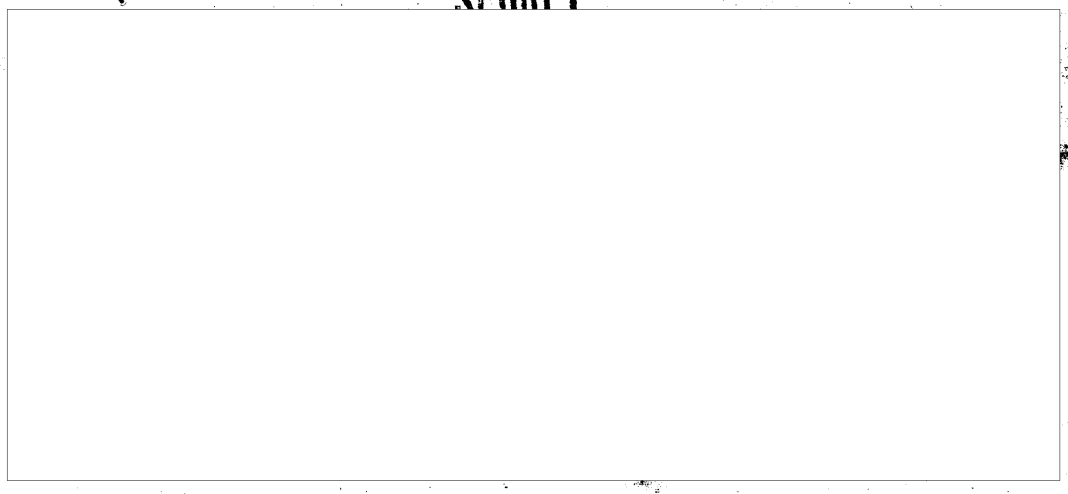
Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1



On the highest elevation of Gruenberg, lying to the northeast of Pechtnersreuth, 1-1/2 km from the boundary, surrounded by high forest, the city of Eger erected a good many years ago a stone observation tower, from which one can get a good view in almost all directions. One gave to it the name of "Bismarck tower". 64 steps lead up to the observation platform. It may be due to the growth of the forest that during the last few years it has not been possible to see the tower.

At the end of September of this year we observed that 4 - 5 men were working there on the installation of new framework, boards and reof at the top of the tower. Now the tower again rises a little above the tree tops but without field glasses it is difficult to make out. Several times already we have observed a weak light there for hours. It is supposed that the tower is occupied by a sentinel at night.

25X1

25X1

[redacted]

On the edge of the forest, about 900 meters northwest of the village of Gosel, we observed on 7-10- a work site covered by a camouflage net. On the work site there were a few soldiers (the exact number could not be determined because of the great distance and the camouflage net) engaged in making an excavation in the ground. During all the afternoon a 3-axle truck made trips carrying construction materials to the work site. It is assumed that here, just as in the spring, a small bunker is being built. No further details could be obtained.

On 8-10, the 1st bunker east of Schloppenhof, which was constructed as early as the beginning of May 1955, was again covered with 1 camouflage net. One truck and several soldiers could be seen on the work site. It is supposed that here one has undertaken the enlargement or reconstruction of the bunker. Further details could not be obtained.

25X1

[redacted]

On 3-10-1955 we observed that the Czechs had surrounded with camouflage nets 2 of the 5 earth bunkers on the south slope of Gruenberg constructed in May of this year. At the camouflaged position on the left there was a 3-axle truck, likewise well camouflaged. At the loading place of the same there were 2 soldiers. One could not determine what the objects were that they were unloading. At 1700 hours the

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

truck drove to the right bunker, stopped there a short time and then went further on into the adjacent forest. On the right camouflaged place the 4 soldiers worked for about 40 minutes, as if they were throwing into the bunker some objects of the size of bricks. Since the objects glittered a little at times it may have been ammunition or something similar to this. One could not see whether the objects were being caught in the bunker or not.

The two points surrounded by red on the enclosed sketch are not yet camouflaged. The other 3 earth bunkers do not have any camouflage nets. As soon as additional observations are made we shall make a separate report of them.

25X1

In the period from 3-10-1955 -- 8-10-1955 Czech soldiers put 5 camouflage nets on the elevation about 1500 meters northeast of Egerteich and on 4-10-1955, they put 2 additional nets on the meadow terrain lying to the west of the highway Schloppenhof-Altkinsberg. The camouflage nets were placed at the same points as those mentioned already in the reference report and after their removal one could see on the respective spots only earth mounds about 3 meters wide and 1 meter high. This time one could not see a camouflage net at the point marked by a cross on the former sketch and the enclosed sketch. It is readily possible, however, that such a net could have been placed here again, but could not be observed because of the bushes and shrubs. Of the 5 camouflage nets placed on the aforementioned elevation, 2 of them were removed on 8-10-1955 and the remaining 3 on 14-10-1955. The 2 nets lying on the Schloppenhof-Altkinsberg highway were not removed until 18-10-1955. The

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

spreading and removal of the nets is done from time to time in the late evening hours or in the early morning hours.

The camouflage nets are made of strong hemp cord and have an average length of 15 - 20 meters. They are placed at a height of 4 - 5 meters and are set up in the form of a tent, well camouflaged [redacted] After the removal of the camouflage nets, no external changes could be observed in the earth mounds (bunkers) already present there. Throughout the day vehicles approached the nets, these being most often covered military trucks, which, judging from their speed upon arrival, were in most cases heavily loaded. The trucks were always unloaded under the nets, and for this reason one could never identify the goods being unloaded. Now and then, upon the arrival of a truck, a few soldiers could be observed under the net, while throughout the day, except on these occasions, the soldiers stayed in the bunkers. Since we did not observe any soldiers being brought up or taken away, we assume that the relief of the labor group took place at dawn or before daybreak.

The camouflage nets are, without a doubt, put in position merely to prevent observation of the constructions materials intended for the inside of the bunker.

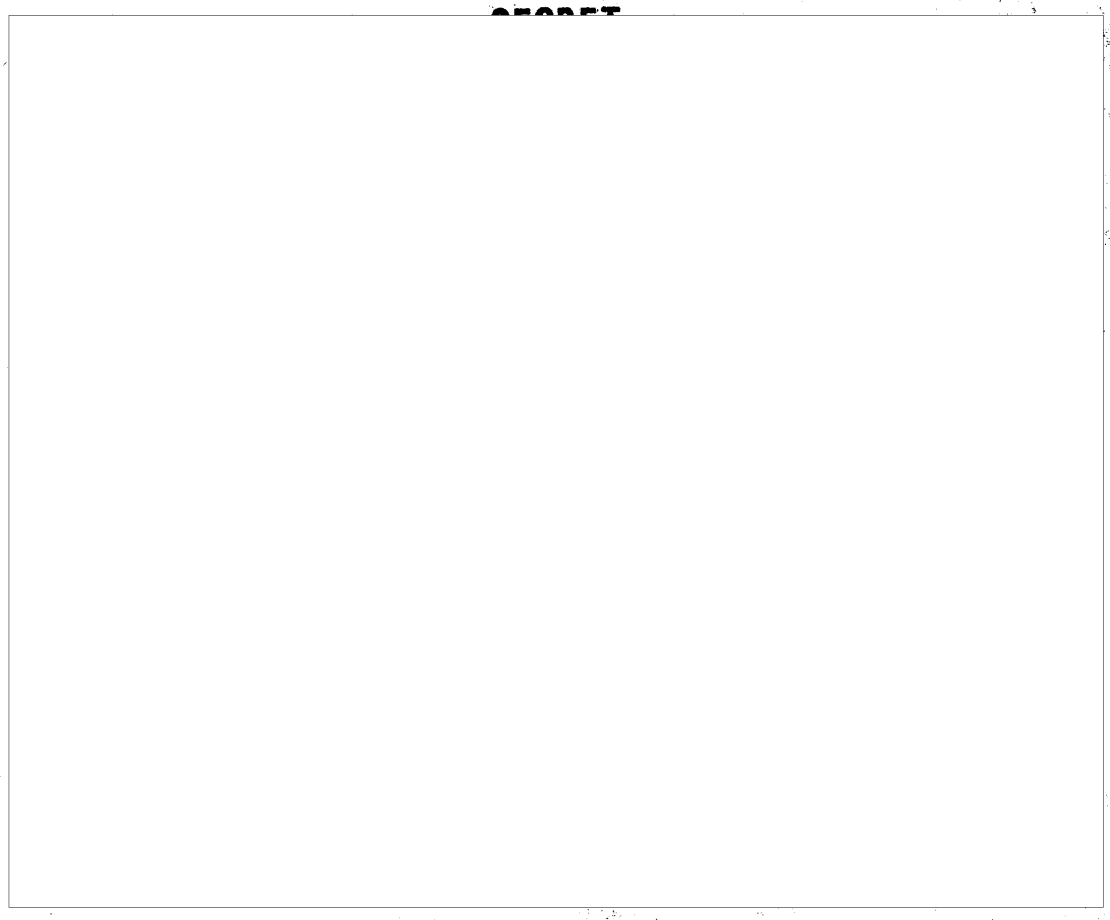
25X1



On the poles for overhead lines behind the obstacles searchlights were set upon from the edge of the forest west of Gosel (Kozly) up to a point beyond "main stone" (Hauptstein) 27. The distance between the poles of the overhead lines amounts to about 40-50 meters. There are on every second pole two searchlights, which provide illumination along the wire fence, while the one searchlight attached to the other poles throws light on the fence itself (See diagrammatic drawing).

From main stone 27 on in the direction of main stone 28, one sees nothing on the poles. We cannot see whether or not the searchlights are already attached through the forest in the direction of mainstone 22.

In the period from 15-10- to 8-11- 1955, a high voltage line was erected in the village of Schloppenhof for the basalt works that are located there. The line begins behind the former factory dwelling lying farthest east, crosses from here the Wondrebtal (valley) behind the Kirsch spinning mill and ends at the Schloppenhof basalt works. There were set up a total of 3 iron poles, painted gray. Of these one is about 20 meters high, located immediately behind the aforementioned factory dwelling house; there is one about 12-15 meters high on the railway embankment of

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

the former stretch Waldsassen - Eger and one which is approximately 10 meters high at the basalt works of Schloppenhof. The post last mentioned is provided with a transformer. The line, which has a total length of about 300 meters, was connected to the high voltage line running from Eger over Schloppenhof towards Altkinsberg.

The Schloppenhof basalt works was idle for several years and did not resume operations until the spring of 1955. The electrification of these works which is now been carried out shows that operations there will be continued. In addition, it is evident from this that the basalt works at Schloppenhof are of economic value for the Czechs.

The high voltage line was plotted on the map in the Station.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

In the period from 8-11-1955 — 17-11-1955 Czech soldiers also placed on the telephone poles behind the barbed wire fence, between the main stones 16 and 20

25X1

a light wire with a searchlight. Apparently, these installations have also been set up in the forested border section, which cannot be observed, between main stones 10 and 16.

The light wiring consists of two wires, each placed on one of 2 insulators mounted on angle brackets attached to the poles. On pole 1 directly under the bracket there is attached 1 searchlight and on every other pole after this 2 searchlights (See inclosed panoramic sketch). In the course of this activity the observation tower standing on the railway embankment at Schoenlind was likewise provided with 2 searchlights, one on the north side and the other on the south side, at a height of about 5 meters. The searchlights, which resemble an arc light, have a diameter of about 30 cm and serve for illuminating the barbed wire fence. For this reason the searchlights are directed somewhat diagonally downwards. The light wiring and the searchlights are attached to the west side of the poles.

25X1

25X1

Up to the present time the searchlights have not been put in operation. It is probable though that in the near future this will be done for trying them out.

25X1

At the point where the wire fence intersects Rantscher woods (500 m southeast of P. 885) - map sheet 6744 Rittseig, coordinate square 78/57) Czech soldiers have been observed repeatedly in the last few days telephoning at a newly erected station. The cable trench dug last year also leads through this place and the telephone station is connected with it in the open terrain.

In the period from 3-10 to 5-10-1955, Czech work parties, with a bulldozer, threw up an earth wall about 30-40 meters long and about 4 meters, high running from west to east, the location of the wall being near the back buildings, at the foot of the "Rantschers", 1 km from the boundary (map sheet 6744 Rittsteig, coordinate square 79/57). It covers the former Weinfurter property (300 m north of P. 735). In front of the wall, in a south direction, the Czechs made with a bulldozer also small flat surfaces 3 meters wide and the length of the wall, at distances of 100,

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

150 and 200 meters. In accordance with observations made up to now, what we have here is a new target range. The three leveled surfaces must be the respective firing ranges.

[redacted]

[redacted] the Czechs, on the east side of the wire fence between Rantscher-wald (Rantscher woods) and Muckenhoehe (map sheet Rittsteig No. 6744 coordinate square 79/57) have erected a new observation tower having the usual form of construction. The tower is about 200 meters from the boundary line, 10-12 meters high and is provided with an observation cabin and a ladder.

[redacted]

In the week just passed the following observation towers were constructed on the Czech border opposite Rittsteig, LK. Koetzting, with observation platform and

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

steps of a new kind:

1) Approximately 30 meters west of the aviation customs office. The observation tower is about 7 - 8 meters high.

2) About 650 meters southeast of Huisenmuehle. The tower is 10 - 12 meters high.

3) At the barracks camp west of Stieglhof.

4) On elevation 855.

The following observation towers were torn down in the same area:

1) Southwest of the aviation customs office.

2) Southeast of the aviation customs office.

3) West of the barracks camp (support point of heavy tank platoon west of Stieglhof)

4) On elevation 855.

The following observation towers were torn down in the same area:

1) Southwest of the aviation customs office.

2) Southeast of the aviation customs office.

3) West of the barracks camp (support point of heavy tank platoon west of Stieglhof)

25X1

[redacted]

As an enclosure we are sending a sketch of a new underground passageway in the barbed wire entanglement eastwards of Baernau. The passageway was built by the Czechs at the beginning of September.

25X1

[redacted]

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

25X1

there has recently taken place a great deal of blasting on Tillenberg (Dylam). Due to the natural camouflage (forest) we have not yet been able to determine the kind of constructions. In the last few days we observed some rather extensive clearing work on the top of Tillenberg, so that some rather large open spaces have been made there.

As we have now determined with certainty, there is on Kahlschlag, about 200 meters southwest of the top of Tillenberg, a bunker. The bunker itself looks like an earth mound about 6 meters wide and about 2 meters high, covered on top with grass sod. The face side, which is not yet camouflaged, is brown in color and has in the middle a loophole about 2 meters wide. Above the bunker there rises a pipe about 1/2 - 1 meter long, which is covered on top like a roof. It is probably a ventilation pipe. Down the slope from the bunker all the high trees have been trimmed and the other vegetation removed.

25X1

25X1

About 100 meters below the bunker there is a barbed wire entanglement and the plowed terrain strips. In the space around the bunker the Czechs are still busy at the present time clearing away the trees.

25X1

Remark: The observation towers marked out on the map sketch have been taken down by the Czechs.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

17

[redacted]

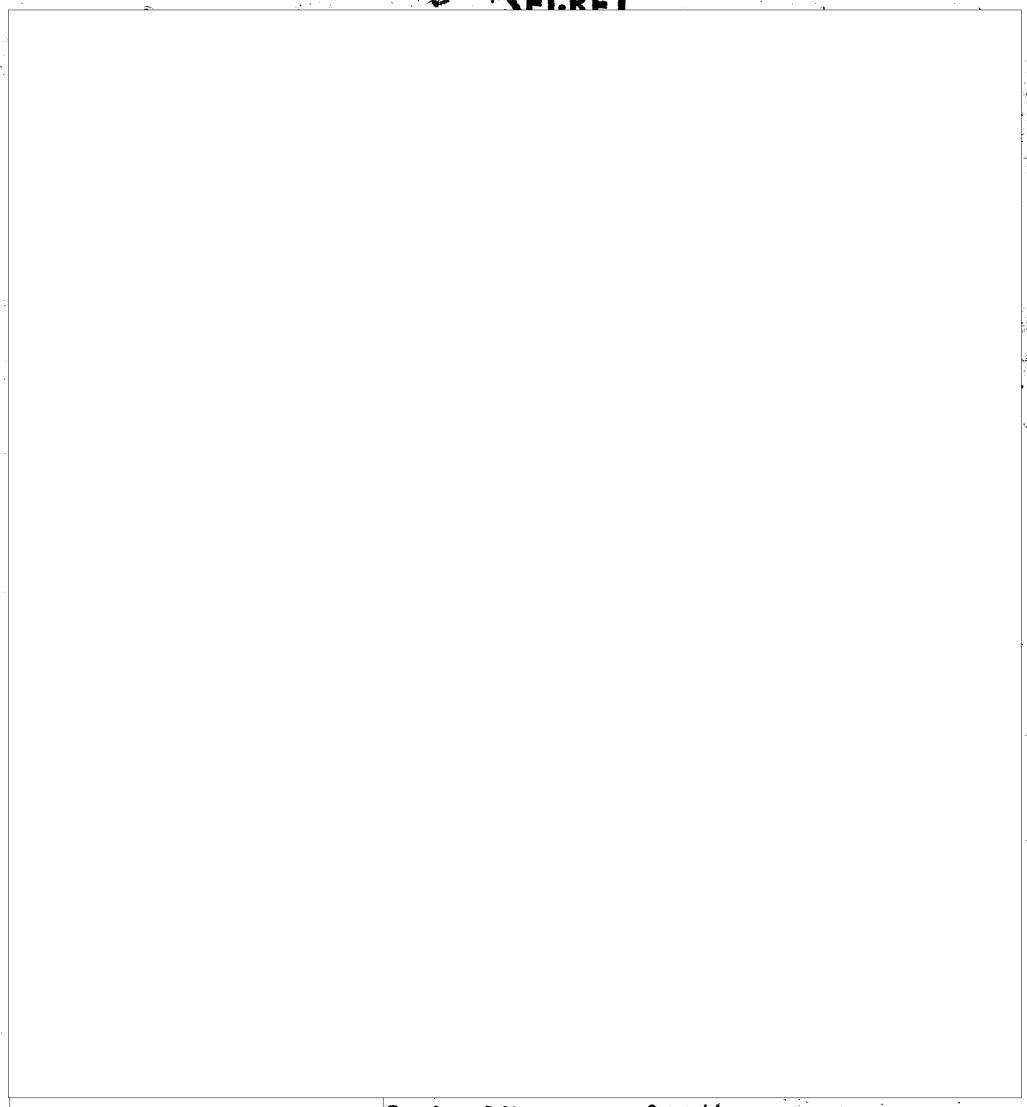
After all the houses in Landstrassen, CSR, were torn down, the observation post, which had been occupied almost continually up to that time fell to the former school of Landstrassen. Now, on 16 - 8 - 1955, one started the construction of a new observation tower. The work was completed on 20-8-1955. The new tower is about 120 meters to the east of the former school of Landstrassen (formerly an observation post), the construction design being that with which we are already acquainted.

On the plane table survey sheet 7148 Bischofsraut (1: 25 000) the new tower is to be found in coordinate square north-south 05, east-west 17.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1



Czech soldiers, on 3-8-1955, laid a heavy cable in the area Elisenthal (Alzbetin), CSR, [redacted] 14 soldiers, directed by a lieutenant, were employed to do this work.

25X1
25X1

For laying the cable one employed two heavy caterpillar tractors. While one tractor went out ahead and made a cable trench about 30 cm deep, the rolled cable was laid with the other tractor. The first tractor went back from time to time and covered the cable trench at once.

In all, the Czechs laid 4 rolls of cable on the stretch marked on the drawing. The cable drums had the inscription "OHGM" and had at the same time the numeral 1.8 with a circle and a diagonal through it. The number is supposedly the diameter of the cable. On one drum there was also the inscription 80 meters.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

The cable was laid through the bushes east of the tip of the forest near Bayer. Haeusl up to the barbed wire entanglement in Buechelbachthal, from there along the barbed wire entanglement on this side of the security strip, southward around the old plate glass grinding mill up to the observation tower at the Railway Station Market Eisenstein (Zelezna Ruda). In accordance with this it is evident that there is now a cable connection (supposedly a telephone cable) between an observation tower on the tip of the forest at Bayer Hausl -- one which has not yet been observed but which certainly exists -- and the observation tower at the Railway Station Markt Eisenstein.

On about 10-8-1955, 4 Czech soldiers, about 100 meters northwest of the old plate glass grinding mill in Elisenthal, CSR, in the immediate neighborhood of the barbed wire entanglement, were observed to be busy around a freshly dug hole in the ground.

They lowered into this hole an object which had the appearance of a package and had dimensions of about 40 x 40 x 50 cm. After this the hole was again filled. From this point a soldier laid a thin cable up to the old plate glass plant. A short time later both of the soldiers appeared on the edge of the forest to the northeast of Bayer. Haeusl, about 100 meters from the boundary. Here they carried out the same kind of work, but because of the bushes we could not determine in a satisfactory manner whether or not at this place they buried an object of the kind described.

So far we have not been able to tell whether the objects buried were mines, alarm installations or something similar. It is worthy of note, however, that the Czechs carried out this work in the daytime, contrary to their usual practice.

25X1

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

25X1 the Czech border agencies, at the beginning of August, erected a new observation tower at point 765, about 625 meters south of Huettenbergl, CSR, opposite Friedrichshaeng, LK. Obervviechtach. The tower is just on the other side of the barbed wire entanglement and is about 18 meters high. On the tower there is a covered observation platform with vision slits on all sides.

From the location of the tower, one may conclude that it is first of all for the observation of the nearby Czech border strip. 25X1

25X1 As yet we have not been able to determine whether or not the tower is occupied by the Czechs. We have not yet seen any measuring or observation apparatus.

The location of the tower may be seen from the enclosed sketch.

25X1

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

[redacted]

On 27-7-1955, at about 1800 hours we saw a Czech soldier standing on this side of the barbed wire entanglement, at the place where the latter enters the Rantscherwald (forest), about 400 meters north of the Freimuth Estate. Shortly thereafter he opened a trap door and stepped into a shaft. A little later this same soldier appeared on the other side of the barbed wire entanglement. He came out from a shaft, after having opened a trap door here also.

This incident shows that the Czechs had constructed a short time before an additional underground passageway under the barbed wire entanglement at the place marked on the enclosed sketch. The underground gallery must have a length of about 6 - 7 meters.

25X1

[redacted]

the Czechs have constructed in the area of Oberhuette, Paadorf, and Birkanschag, CSR, 3 new observation towers. The separate locations of the towers can be seen from the enclosed sketches.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

[redacted] 22

The tower south of Oberhuette (Hermi Hut) is 150 meters east of elevation 597, close up to the barbed wire obstacle. It is about 8 meters high and provided with an observation platform. From the place where the tower is located the Czechs can observe all their immediate border strip. [redacted]

[redacted]

The second tower is about 400 meters southwest of Paadorf on open terrain, immediately on the other side of the barbed wire entanglement. It is about 25 meters high and provided with an observation platform that does not have any roof. The tower serves first of all for the surveillance of the Czech border zone. [redacted]

[redacted]

The third tower is on elevation 699 on the Birkenschlag (birch clearing), likewise just on the other side of the barbed wire obstacle. The method of construction is the same as in the case of the observation tower southwest of Paadorf.

[redacted]

Czech soldiers north of Muckenhoehe (about 1 km southwest of Hinnterhaeuser (back buildings) - Zadni Chalupy, Dist of Klattau - Klatovy) map sheet 6744 Rittsteig, coordinate square 79/56, made an underground passage under the barbed wire fence.

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

Approved For Release 2008/01/28 : CIA-RDP83-00418R003200230001-9

25X1

25X1 Czech soldiers in the last few weeks have laid out a drill field along the road Vollmau (Formava), Dist Taus (Domazlice), CSR to Furth i. Wald, at terrain point 451 (map sheet 6643 Furth i. Wald, coordinate square 61/68). 25X1 Over a distance of 80 to 100 meters various timber obstacles were set up. The sealing off part consists of a wooden wall about 3 - 4 meters high with openings the size of windows. Later observations showed that the place was used as a dog training place.

25X1

the last few weeks Czech soldiers have built some solidly constructed barracks at elevation 1084, about 5½ km northeast of Hirschbach, LK (aviation dist.) Grafenau

(Map sheet 6946 Hirschbach, coordinate square 86/33), such as various heavy tank platoons already have. It is assumed that these structures serve as shelter for a border unit of platoon strength.

Czech soldiers in the period from 30-8- to 8-9, 1955 constructed an observation tower about 12 m high, with a platform and ladder, of the well known type of construction, about 500 meters north of the Railway station Bayer. Eisenstein. The tower has already been occupied at times.

At the same time the observationstowers in the forest glade (north of Ry Sta. Bayer. Eisenstein) and that between the Ry Sta Eisenstein and Adlersaege have been built anew, the type of construction remaining the same. The Towers of an older type of construction present there were torn down beforehand.

25X1

last 14 days Czech soldiers have constructed two observation towers about 15 -18 m high, with a platform and ladder, the construction design being of the usual kind. They are located ab ut 8 km north of Hirschbach, LI. Grafenau, in the neighborhood of the heavy tank platoon support point Obersteindlberg (map sheet 6946 Hirschbach, coordinate square 98/39). As yet we have not observed the occupation of the towers.

25X1

a heavy tank detail made on 21-9-55 (about 250 m northwest of Heuhof (Sruby), Dist of Klattau (Klatovy), CSR - map sheet 6744 Rittsteig, coordinate square 72/64 a passageway about 3 m wide through the barbed wire fence. The gate consists of a wooden frame covered with barbed wire, On the gate posts there are also some insulators.

25X1

The passage serves supposedly for improving the removal of the meadow grass between the wire fence and the boundary.
